Electronic mail address designation method for mail transmission in electronic mail system  
- involves converting name of person to corresponding E-mail address with reference to  
pre-registered name-address conversion table, and setting it in address field

IIITACII L'FD 96.09.09 96JP-237533

T01 (98.03.31) G06F 13/00, 3/033, 17/22, H04L 12/54, 12/58, G06F 17/24,  
3/14

The method involves filling-in the name of a person included in the back text field  
of E-mail text into an address field using a positioning device, such as mouse. The name  
of the person is converted into corresponding E-mail address with reference to a pre-  
registered name-address conversion table. The converted address is set in the address field.

ADVANTAGE - Designates transmission address simply and quickly. (5pp  
Dwg.No.1/6)
